

Google Alert

Google Alerts is a content change detection and notification service, offered by the search engine company Google. The service sends emails to the user when it finds new results—such as web pages, newspaper articles, blogs, or scientific research—that match the user's search term(s). In 2003, Google launched Google alerts which were the result of Naga Kataru's efforts. His name is on the three patents for Google Alerts

The screenshot displays the Google Alerts interface. At the top left is the Google logo, and at the top right is a menu icon. The main heading is "Alerts" with the subtitle "Monitor the web for interesting new content". Below this is a search input field containing "Soutech ventures" with a search icon on the left and a close icon on the right. Underneath the search field are several configuration options, each with a dropdown menu:

- How often: At most once a day
- Sources: Automatic
- Language: English
- Region: Any Region
- How many: Only the best results
- Deliver to: goodnessadyo@gmail.com

At the bottom of the configuration section are two buttons: "Create Alert" and "Hide options". Below the configuration section is an "Alert preview" section with the text: "There are no recent results for your search query. Below are existing results that match your search query."

You can add your email to get notifications when such key word is searched.
